

Installation of the software and Authorization

Proceed with the installation package corresponding to your platform.

Once installed, launch the app. You will get the following window (crossed by a green stripe):

Right-click (Mac: shift-click; track pad two finger click) the power button, bottom right of this window, and select the option “**Product Id**” in the menu.

A browser window opens and displays your product id—**required to get your activation key and unlock all the functionalities!** Email this product id to software-support@studioelectronics.com.

Once you receive the **activation key** via return email, paste it (using the usual keyboard shortcut) into the activation key message box and click “**Done**” (*make sure the SE-1X window is active before pasting*). The green stripe vanishes; your software is authorized.

IMPORTANT: “**activation key**” menu option is not active before MIDI IN FROM SYNTH and MIDI OUT TO SYNTH being defined (see [Error! Reference source not found.](#)).

As long as your software is not authorized, you can't open the extended panel except to configure the MIDI ports and you remain locked to bank 1.

Questions remain? Email software-support@studioelectronics.com.
